

**Project Design Phase-I Solution
Architecture**

Date	6 October 2022
Team ID	PNT2022TMID15198
Project Name	Project - IOT Based Safety Gadget for Child Safety Monitoring & Notification
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

SOLUTION:

It can track the current location of the child using GPS and continuous monitoring can also be done. When the gadget detects the activity to be outside the given geo-fence (as mentioned by the parent or guardian), alert messages or notifications are sent to the registered device, appropriately. Additional features such as recording of messages could be done if the child cross the geo-fence.

Example - Solution Architecture Diagram:
